

Important Information from **GGF**

Proud Makers of Green Gold Filters Micro Refineries

Made
in
USA

What are some Valuable Uses of Waste Oils, Fuels & Solvents?

Waste Oils may be used for:

Fuels: Diesel (check MythBusters, etc.), Turbine, Burner, Waste Oil Heater, etc.

Biodiesel Feedstock (IF YOU MUST USE BIODIESEL, BE CAREFUL!)

Diesel Fuel Lubricity Additives

Special & General Lubricants: Cutting Oil, Lubricating Oil, etc.

Small Engine Oils: Chain Saw Bar Oil, 2-Cycle Oil, etc.

Hydraulic Oil (Re-Refined hydraulic oil)

Concrete Form Release Oil

How? --->

Contaminated Fuels may be used for:

Engine, Turbine & Burner Fuels

Thinning Heavier Fuels in cold weather or for small engines & burners

Cutting Gums in Vegetable Oils used as fuel

Cleaners & Solvents

How? --->

Solvents may be used for:

Solvents

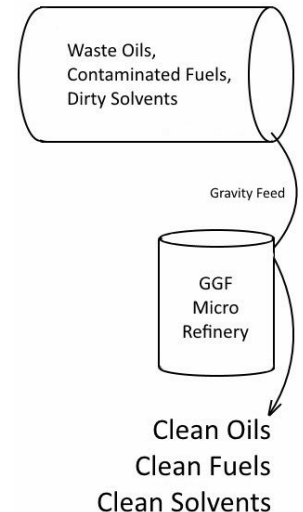

Cleaners

Thinning Heavier Oils

Cutting Gums in Vegetable Oils used as fuel

How? --->

*The GGF Process
is HOW*

How is this possible? We make inexpensive Micro Refineries that remove solid contaminants, **AND** water-based contaminants such as acids & salts, in a single step without the need for heat, electricity or chemicals, **turning waste you have to pay to get rid of into valuable products you otherwise would have to buy.**

What makes Waste Oils, Fuels & Solvents so Valuable?

We'd heard that fuel costs were driving some farmers out of business, so we decided to demonstrate some ways they could get some economic relief at the local fairs and Farmers Market. When *we showed our micro Refinery that can clean up waste oils so well that they can be burned as diesel fuel* in many engines, one man started to tremble. I feared he might be having a heart attack but he said: *'Do you mean to tell me that the 2000 gallons of waste oil I just paid \$700 to have hauled away could have been made into \$8000 worth of fuel?'* I had to answer: **"Yes" ...Waste Oils, Fuels & Solvents are worth a lot.**

Farmers, Equipment Operators, Truckers, Dredge Operators, Fishermen, Manufacturers, Preppers, Shop Owners, Restaurants, and ordinary people either haul it yourself to a recycling center OR PAY \$0.35-\$0.85/gallon to dispose of Waste Oils, Old Fuels and Used Solvents; most of which can be **cheaply turned into the very useful products you have to turn around and pay money to buy.**

EITHER pay \$0.35-\$0.85/gallon to give your resources to someone else to profit from

OR invest 13-48¢/gallon to turn it into products you're now paying \$3.00-\$20.00/gallon for...

... YOUR CHOICE

Important: Did you know that Biodiesel is 80% Petroleum Diesel + only 20% Biodiesel?

The question is not: "Can you afford to invest in a Refinery?" but rather: **"How can you afford not to?"**
